DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

I. Claims 1 – 8 and 16, drawn to a method and system for determining critical timing path sensitivities of macros in an IC, and are classified in class 716, subclass 6.

II. Claims 9 – 15, drawn to a system for testing a semiconductor device including a plurality of macros, and are classified in class 716, subclass 4.

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a method and system for the determination of critical timing path sensitivities of macros in an IC, while invention II has separate utility such as a system for testing a semiconductor device that includes macros. See MPEP § 806.05(d).

Art Unit: 2825

3. These two distinct inventions are thus restricted. A telephone conversation with Mr. Mike J. Amerson (Registration No. 35,426) on 07 July 2004 to request an oral election to the above restriction requirement did not result in an election being made.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
